

Install Gap and Streak

Two private money apps that install from your browser like any other app: no app store, no account, no bank login.

SCAN TO OPEN

OPEN THIS PAGE ON THE DEVICE YOU'LL USE

1 app.befreeacademy.site

Scan the code with your phone's camera, or type the address.

2 Install Gap first, then Streak

Follow the steps for your device. The page then takes you to Streak.

iPhone or iPad

Safari

- 1 Tap **Share** . Don't see it? Tap next to the address bar first.
 - 2 Tap **Add to Home Screen** . Scroll down if you don't see it.
 - 3 Keep **Open as Web App** on, check the name says **Gap**, then tap **Add**.
- Chrome on iPhone works too, on iOS 16.4 or later.

Android phone

Chrome

- 1 Tap **Install Gap** on the page, then **Install**.
- 2 No button? Tap at the top right, then **Add to Home screen** or **Install app**.
- 3 If asked, choose **Install**, not "Create shortcut", and confirm.

Windows or Mac

Chrome or Edge

- 1 Click **Install Gap** on the page, or the install icon at the right of the address bar.
- 2 No button? Use the browser menu:

Chrome > Cast, save, and share > Install page as app

Edge > Apps > Install this site as an app
- 3 Click **Install**. Gap opens in its own window.

Mac

Safari

- 1 In the menu bar, click **File** > **Add to Dock**. You'll also find it under **Share** .
 - 2 Check the name says **Gap** and click **Add**.
 - 3 Open Gap from the Dock from now on, not from a Safari tab.
- Needs macOS Sonoma 14 or later. On an older Mac, use Chrome.

Now Streak. When Gap is installed (on iPhone and Safari, tap **I've added Gap** on the page), it shows **Now install Streak**. Tap it and repeat the steps; the name should say **Streak**. Done when you see two icons, **Gap** and **Streak**.

3 Then, a few good habits

☑ Open from the icons

Enter your numbers in Gap and Streak from their icons, not a browser tab. On iPhone, iPad and Safari on Mac, a tab keeps separate data.

⬇ Back up each app weekly

Gap and Streak keep separate records, so back up each one: **Settings** > **Save a backup file**. Also after setup and big changes.

🔒 Private by design

Your entries stay on your device; nothing is sent to us. **Encrypted backup** adds a passphrase to the file. Keep it safe.

Coming from the older one-window version? Save a backup there first, then use **Settings** > **Restore from a backup**.
